

# 21st Annual Summer Program in Population Health

## Virtual Summer Program Courses Available through End of Summer

The 21st Annual Summer Program in Population Health has adapted this year's program to a complete virtual format due to the COVID-19 pandemic. All courses range from 7 - 14 hours in length and are self-paced. Registration will remain open through **July 27, 2020** and participants will have until **August 31, 2020** to complete any online courses. Continuing education units are available for nurses, CHES/MCHES, registered sanitarians and those who are Certified in Public Health.

### Virtual Course Offerings:

#### Financial Management and Budgeting Bootcamp

**Course length:** 7 hours

**Cost:** \$150 registration, \$75 student rate

**Description:** This course provides an introduction to the field of health care management of public health and health care organizations. The course will engage students with the following health care financial management topics: the income statement and the statement of changes in equity; financial condition analysis; and planning and budgeting.

### **Mixed Methods to Understand and Evaluate Public Health Problems**

**Course length:** 14 hours

**Cost:** \$300 registration, \$150 student rate

**Description:** Mixed-methods research is growing in acceptance in public health, calling for the development of new research skills among future health leaders. By integrating quantitative, outcome-based approaches with qualitative stakeholder engagement methods, public health leaders and researchers should be able to better identify, assess, evaluate and implement improvement initiatives in public health. The course is designed for novice and seasoned researchers.

### **Practical Implementation of Health Equity Initiatives**

**Course length:** 14 hours

**Cost:** \$300 registration, \$150 student rate

**Description:** Everyone should have the same opportunity to achieve optimal health, yet operationalizing health equity remains a big challenge. This course will define and explore key health equity concepts. Participants will learn tools and techniques to apply these concepts to protect the health of populations, including those made vulnerable through challenging social determinants of health.

### **Place-Based Qualitative Methods in Health Promotion**

**Course length:** 8 hours

**Cost:** \$150 registration, \$75 student rate

**Description:** This course will provide a basic introduction to qualitative methods that have utility in health promotion. Participants will explore concepts from human geography and qualitative research approaches including interviews, focus groups and visual methods. The course is designed to expose participants to questions of why and how to consider place, particularly within the social determinants of health framework and a community-engaged research or practice.
