

Florida VIP for Healthy Communities

VACCINATE. Vaccines are a safe and effective way of protecting people against harmful diseases without having to actually be infected with them.

IMMUNIZE. Immunity is the result of a vaccination when your body has made antibodies to be ready to fight a new virus or other germ.

PROTECT. Immunity can keep you from getting sick or getting severely ill. It can stop the virus from spreading, which can help protect whole communities.

FLORIDA VIP FOR HEALTHY COMMUNITIES PROGRAM

is a community resource for those who are interested in learning more about adult vaccines, including COVID-19 and flu. We provide science-based information to help Floridians make informed choices regarding how to best protect yourself, your family, and your community from vaccine-preventable illnesses. We host educational events, mobile vaccination clinics, and town-hall style meetings with community leaders and health experts. Join our mailing list to receive weekly updates about your community.
