What is hepatitis B?

Hepatitis B is an infection of the liver that spreads through the contact of bodily fluids of an infected person. Symptoms include dark-colored urine, clay-colored stool, fever, fatigue, joint pain, loss of appetite, nausea, vomiting, and jaundice (yellowing of the skin)

What is meningitis?

Meningitis is a swelling of the protective covering of the brain that spreads through coughing, sneezing, or saliva. Symptoms include fever, headache, rash, stiff neck, light sensitivity, and drowsiness

What is HPV?

Human papillomavirus (HPV) is a sexually transmitted infection that spreads through sexual contact or contact with the blood or saliva of an infected person. Symptoms include warts, unusual growths, lumps, or sores around the genital area
